

renov8

WALL PANEL SYSTEM

The First & Only British World Squash Federation Accredited Court Company

Designed, manufactured & built entirely within the UK, Renov8 is a single skin system and can be used for new build or existing court renovations – for both front and side walls. It is installed directly onto existing blockwork or plastered walls. A cavity between the block & panel is filled with fire-dried sand.

All of the surface joints are fully prepared & filled. This ensures that the panel surfaces are free of visible joints & gap lines, before applying the specialist 'hardwall' coating. A front wall would take 3 days to install and the court is then immediately ready for action.

WORLD SQUASH ACCREDITED PRODUCT

All Rennov8 squash court panels & associated products have full World Squash Federation & England Squash accreditation.

After undergoing a rigorous research, development & testing process, you can rest assured that the products supplied by us are fit for purpose and come with a UK manufactures full **10 year warranty**. We are the only company in the UK that manufactures & installs panel court systems. By utilising new modern manufacturing techniques, the Rennov8 squash court panel system does away with outdated construction methods.

The courts are remarkably easy to maintain and as such reduce down time when it comes to maintenance, compared to traditional courts.
